2nd Guildford
Supportive Care in Cancer
Course

9th-10th November 2016
Royal College of Physicians, London

Royal Surrey County Hospital
NHS Foundation Trust
**Background**

The Multinational Association for Supportive Care in Cancer (MASCC) has defined supportive care as “the prevention and management of the adverse effects of cancer and its treatment. This includes management of physical and psychological symptoms and side effects across the continuum of the cancer experience from diagnosis through anticancer treatment to post-treatment care. Enhancing rehabilitation, secondary cancer prevention, survivorship and end of life care are integral to supportive care”.

The aim of this two day course is to provide healthcare professionals working in oncology with an up-to-date, evidence-based review of current issues within supportive care. All of the speakers work in oncology, and all of the speakers have an interest in various aspects of supportive care; the speakers include specialists in clinical oncology, medical oncology, palliative medicine, psycho-oncology, oral medicine, gastroenterology, pain medicine, endocrinology and pharmacology.

The main focus of this course is metastatic bone disease, and strategies for preventing the development / progression of this problem, and especially strategies for managing this problem: speakers include renowned specialists from the specialties of Oncology, Palliative Medicine, Radiology and Orthopaedic Surgery.

The course is organised by the Department of Supportive & Palliative Care at the Royal Surrey County Hospital (incorporating St. Luke’s Cancer Centre), and has been endorsed by the Executive Committee of the Multinational Association for Supportive Care in Cancer.
Programme Day 1

09.30-09.40: Chairman’s introduction
Andrew Davies

09.40-10.10: Supportive care – what do we mean?
