

Methodology for Antiemetic Studies

Richard J. Gralla, MD

Objectives

- 1) To outline methodology issues in antiemetic studies based on the recent Perugia Guideline Consensus Meeting
- 2) To review the consensus process
- 3) To discuss the rationale of applying the guideline process to methodology in under-addressed areas, including nausea
- 4) To outline methodology for pursuing major emetic areas with remaining problems
- 5) To discuss the application of basic studies to clinical methodology
