

Minutes of Bone Complication Study Group June 2008

An informal meeting of the bone complication group was held as the chair, Allan Lipton was not able to attend this year's MASCC meeting. Three interested members discussed informally their practice and interest in bone complications. Dr. Beck-Mannagetta MD DD of Austria talked about a study he conducted within Austria regarding treatment practices of jaw bone complications. It was discussed if this might be an interesting study for the entire study group to undertake to see what variations there are in practice globally. JJohnson, who led the meeting, will bring this suggestion back to Dr. Lipton. She also indicated that there will be two co-chairs selected in the coming months. Members can expect some communication regarding future projects of this study group once these other positions are in place..
