Work after cancer.
Special considerations in AYA cancer survivors

Top 10 research priorities for teenage and young adult cancer

1. What psychological support package improves psychological well-being, social functioning and mental health during and after treatment?
2. What interventions, including self-care, can reduce or reverse adverse short and long term effects of cancer treatment?
3. What are the best strategies to improve access to clinical trials?
4. What GP or young person strategies, such as awareness campaigns and education, improve early diagnosis for young people with suspected cancer?
5. What are the best ways of supporting a young person who has incurable cancer?
6. What are the most effective strategies to ensure that young people who are treated outside of a young person’s Principal Treatment Centre receive appropriate practical and emotional support?
7. What interventions are most effective in supporting young people when returning to education or work?
8. How can parents/carers/siblings/partners be best supported following the death of a young person with cancer?
9. What is the best method of follow-up and timing which causes the least psychological harm, while ensuring relapse/complications are detected early?
10. What targeted treatments are effective and have fewer short and long term side-effects?

Aldiss et al., MASCC 2018
Work after cancer for AYAs

• Work matters
  – for social and financial reasons
• AYAs are more vulnerable
• We, the providers, do not manage it well
What makes AYAs unique?

• Developmental stage
  – Key milestones: graduation, first job, moving out of home, parenthood etc
  – Limited time to catch up if delayed

• Physical and emotional vulnerability
  – Still developing physically and emotionally
  – Limited life skills
  – Limited financial reserves
  – Limited support

• More likely to suffer from cancers that are complex, rare, and treated intensively (high cost)
Australasian Consensus Statement on the Health Benefits of Work

At the heart of this consensus statement regarding the health benefits of work is a shared desire to improve the welfare of individuals, families and communities.

Realising the health benefits of work for all Australians requires a paradigm shift in thinking and practice. It necessitates cooperation between many stakeholders, including government, employers, unions, insurance companies, legal practitioners, advocacy groups, and the medical, nursing and allied health professions.

We commit to working together to encourage and enable Australians to achieve the health and wellbeing benefits of work. We acknowledge the following fundamental principles about the relationship between health and work:

- Work is generally good for health and wellbeing
- Long term work absence, work disability and unemployment have a negative impact on health and wellbeing
- Work must be safe so far as is reasonably practicable
- Work is an effective means of reducing poverty and social exclusion, including that faced by indigenous populations and other currently disadvantaged groups. With appropriate support, many of those who have the potential to work, but are not currently working because of economic or social inequalities, illness or acquired or congenital disability, can access the benefits of work
AYA HOPE Study

• n=463, 15-39
• At 35 months post diagnosis
• More than 50% reported problems with work/school
• Uninsured least likely to return

Parsons et al. JCO 2012
Fig 2. Reported problems with work and school from baseline to follow-up among full-time workers/students (n = 388).
Educational and vocational goal disruption in AYA cancer survivors (Vetsch et al, 2018)

• 42 participants (50% female), 7 hospitals
• 15-26 yr, less than 2 yrs post treatment
• Psychosocial Adjustment to Illness Scale
  • 12(28.6%) mild impairment
  • 14(33.3%) moderate impairment
  • 3(7.1%) marked impairment
  • most did not see their performance as compromised (23/42;55%)
  • the majority indicated their vocation goals were of equal or greater importance than before diagnosis (26/42;62%)
Why should it matter to oncologists?

• General distress
  – QOL, survival and health service utilization

• Financial toxicity
  – QOL, survival and health service utilization

• Treatment/follow-up non-adherence
  – QOL, recurrence and survival
Work and financial toxicity – connecting the dots

Cost

Financial toxicity

Financial vulnerability

Financial vulnerability

Financial security

Ability to pay (income + savings)
AYA HOPE study

- 90% need for financial support
- Quitting work was a risk factor for non-adherence to follow-up
What can be done?

• Data
  – Vulnerable subgroups data reporting
    • Manual labour/low education/rural and remote
• Screen for problems
• Provide resources
• Deliver interventions
# Return to work after cancer rehabilitation

Mehnert et al.

## Table 2. Time period of return to work (RTW) and reemployment after rehabilitation (N=568).

Welcome to the Work after Cancer website - a resource to support work during and after cancer diagnosis, providing advice to people diagnosed with cancer, their loved ones, clinicians and employers about their options, rights and responsibilities.

In order for us to best assist you, please select the role that best describes you.

- Person diagnosed with cancer / carer / family member
- Health care professional
- Employer
Workaftercancer.com.au – key features

- Return to work plan
- Return to work/driving assessment
- Questions prompts
- Rights and responsibilities
- Stories of survivors
- Links to existing resources
• 15 RCTs of 1835 patients (7 BC, 2 PC)
• all in high income countries
• moderate evidence that multidisciplinary interventions incorporating physical training, psycho-education and vocational components improve RTW
• there were no studies directed at the workplace
Priorities for research

• Targeted interventions
  – Decision support
  – Rehabilitation

• Data
  – Embedding socioeconomic determinants of health into the data analysis for clinical cancer trials

• Note: financial toxicity and work is not reported on in clinical trials
Priorities for system change

Figure 1. Four dimensions influence financial costs of care.

Gott et al., Pall Med. 2015
Work after cancer for AYAs

• Work matters
  – for social *and* financial reasons
• AYAs are more vulnerable
• We, the providers, do not manage it well
  • But there is much that we can do!
“The consequence of not dying was nearly as tragic as my diagnosis because I had no direction, no one to coach me as to what’s next for a 22-year-old who’s lost his career”

Matthew Zachary. Founder, Stupid Cancer
